Kinetic chemotaxis model

-

• • • • • • • • • • • • •

Outline

(I) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1))

 $f : \mathbb{R}^n \times V \to \mathbb{R}$. f(x, v) is density of bacteria (e.g. E. Coli) at position x with velocity v. $V \subset \mathbb{R}^n$ compact.

 $S : \mathbb{R}^n \to \mathbb{R}$. S(x) is density of chemical signal at position x.

(1)
$$\partial_t f(t) = -\mathbf{v} \cdot \nabla_x f(t) + \mathcal{T}[\mathbf{S}(t)]f(t),$$

(2) $\tau \partial_t \mathbf{S}(t) = \mathbf{D} \Delta \mathbf{S}(t) + \alpha \rho(t) - \beta \mathbf{S}(t) \qquad (\alpha, \beta \ge 0, \ \tau, \mathbf{D} > 0),$
 $\rho(\mathbf{x}, t) = \int_V f(\mathbf{x}, \mathbf{v}, t) \, d\mathbf{v}.$

Turning kernel T[S](x, v', v) is probability density of changing velocity from *v* to *v'* at position *x*, given the global signal *S*

$$\begin{aligned} \mathcal{T}[S]f(x,v) &= \\ -\int_V T[S](x,v',v)\,dv'\cdot f(x,v) + \int_V T[S](x,v,v')f(x,v')dv'. \end{aligned}$$

Functional analytic approach

Consider the *integral form* of (1) - (2) (Variation of Constants-formula):

- • $f(t) = T_{\Phi}(t)f_0 + \int_0^t T_{\Phi}(t-s)\mathcal{T}[S(s)]f(s) ds.$
- $\bullet S(t) = T_d(t)S_0 + \dots$
- • $(T_{\Phi}(t))_{t\geq 0}$ (strongly continuous) *transport semigroup* with generator $-v \cdot \nabla_x$. $T_{\Phi}(t)f(x, v) = f(x vt, v)$.
- • $(T_d(t))_{t\geq 0}$ (strongly continuous) *diffusion semigroup* with generator $D\Delta$.
- $f \in L^1(\mathbb{R}^n \times V) \cap L^p(\mathbb{R}^n \times V), S \in W^{k,q}(\mathbb{R}^n) \cap W^{k,\infty}(\mathbb{R}^n).$

Some achieved results: global existence, uniqueness and positivity of mild solutions to (1) - (2):

- Local Well-posedness of Kinetic Chemotaxis Models (by Hille), J. Evol. Equ. 8, 2008.
- Global existence of positive mild solutions to a class of kinetic chemotaxis equations (by Hille, W), MI-Leiden Report 2007-47

f represents density of the bacteria. $L^1(\mathbb{R}^n \times V) \subset \mathcal{M}(\mathbb{R}^n \times V)$.

Question

(How) can we consider solutions of (1) - (2) in a space of measures?

- Flow on state space $\mathbb{R}^n \times V$: $\Phi_t(x, v) = (x + vt, v)$.
- Transport semigroup $T_{\Phi}(t)f(x, v) = f(\Phi_t^{-1}(x, v)) = f(x vt, v)$.
- How to formulate this in a space of measures?

- $P_{\Phi}(t)\mu(E) := \mu \circ \Phi_t^{-1}(E).$
- Dirac measure δ_x : $P_{\Phi}(t)\delta_x = \delta_{\Phi_t(x)}$.
- $\mu(t) = P_{\Phi}(t)\mu_0 + \int_0^t P_{\Phi}(t-s)\mathcal{T}[S(s)]\mu(s) \, ds$

Outline

(I) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1))

- State space (S, d) complete separable metric space
- *M*(*S*) Banach space of finite Borel measures
- with total variation norm $\|\mu\|_{\mathsf{TV}} = \mu^+(S) + \mu^-(S)$.

But: topology is too strong!

• If
$$x \neq y$$
, then $\|\delta_x - \delta_y\|_{\mathsf{TV}} = 2$.

- So $t \mapsto P_{\Phi}(t)\delta_x = \delta_{\Phi_t(x)}$ only continuous if $\Phi_t(x) = x$.
- In general $t \mapsto P_{\Phi}(t)\delta_x$ not even strongly measurable.

Weak topology

 $C_b(S) =$ space of bounded continuous functions $S \to \mathbb{R}$.

- More natural topology on $\mathcal{M}(S)$: weak topology $\sigma(\mathcal{M}(S), C_b(S))$.
- Drawbacks: is only a *locally convex topology*, not given by a norm.

 $\mathsf{BL}(S) = \mathsf{Banach}$ space of bounded Lipschitz functions with norm $\|f\|_{\mathsf{BL}} = |f|_{\mathsf{Lip}} + \|f\|_{\infty}.$

Results by Dudley (1966):

- $\mathcal{M}(S)$ embeds into $\mathsf{BL}(S)^*$: $\mu(f) = \int_S f \, d\mu$.
- $\mathcal{M}^+(S)$ is complete with respect to norm on $\mathsf{BL}(S)^*$.
- Restriction of norm topology of BL(S)* to M⁺(S) equals restriction of weak topology to M⁺(S).

イロト 不得 トイヨト イヨト ニヨー

Consider $S_{BL} := \overline{\{\text{span of Dirac measures}\}}$ in $BL(S)^*$. Then

- S_{BL} is a separable Banach space.
- $\mathcal{M}(S) \subset \mathcal{S}_{\mathsf{BL}}$ dense.
- $\mathcal{S}^*_{\mathsf{BL}} = \mathsf{BL}(\mathcal{S})$
- $\mathcal{M}^+(S)$ is a closed convex cone in \mathcal{S}_{BL} .
- So we can view \mathcal{S}_{BL} as ordered Banach space with positive cone $\mathcal{M}^+(S).$
- In general *M*⁺(*S*) − *M*⁺(*S*) = *M*(*S*) ⊊ *S*_{BL} (unless *S* uniformly discrete).

Embedding of semigroups of Lipschitz maps into positive linear semigroups on ordered Banach spaces generated by measures (by Hille, W.), *Integr. Equ. Oper. Theory* **63**, 2009.

Theorem (Hille, W.)

If $(\Phi_t)_{t\geq 0}$ is a semiflow on *S* such that

- $Iim \sup_{t \downarrow 0} |\Phi_t|_{\mathsf{Lip}} < \infty$
- 2 $t \mapsto \Phi_t(x)$ is continuous for all x,

then $(P_{\Phi}(t))_{t\geq 0}$ extends to a strongly continuous semigroup on S_{BL} , leaving $\mathcal{M}^+(S)$ invariant.

Allows for an interpretation of

$$\mu(t)= \mathcal{P}_{\Phi}(t)\mu_0+\int_0^t \mathcal{P}_{\Phi}(t-s)\mathcal{T}[S(s)]\mu(s)\,ds.$$

- + equation for *S*.
- Under certain conditions on turning kernel we obtain global existence and uniqueness of (positive) mild solutions.

Remark: we can exploit S_{BL} to obtain results of existence, uniqueness and stability of invariant measures for Markov semigroups on spaces of measures.

D. Worm (with S. Hille) (Leiden University)

Thank you for your attention

www.math.leidenuniv.nl/~dworm

Let (Ω, Σ, μ) be a measure space.

Theorem (Hille, W.)

Let $p : \Omega \to \mathcal{M}^+(S) \subset \mathcal{S}_{BL}$. Then the following are equivalent:

(i) p is strongly measurable as function from Ω to S_{BL}

(ii) for every Borel set $E \subset S$, $\omega \mapsto p(\omega)(E)$ is measurable.

Theorem (Hille, W.)

Let $p : \Omega \to \mathcal{M}^+(S) \subset \mathcal{S}_{\mathsf{BL}}$ be Bochner integrable with respect to $\mu \in \mathcal{M}^+(S)$. Then

$$\int_{\Omega} p(\omega) d\mu(\omega)(E) = \int_{\Omega} p(\omega)(E) d\mu(\omega).$$
